Work Needed:

Upon inspection of the above unit, it was found that the mechanical seals had worn into the shafts allowing water to enter the gearbox and motor. It was also found that the cord trumpet was broken.

Repairs will include: Disassemble, sandblast/clean and inspect parts, inspect for wear and measure bearing shaft and housing fits, steam and bake out stator, inspect and surge test winding, hi-pot test, build up and machine (2) seal surfaces, furnish and install new factory parts, new cord trumpet, new pencil electrode with 10m cord, new Wilo repair kit, consisting of; mechanical seals, bearings, lip seals, o-rings and misc. hardware, furnish and install new power cord and re-pot cord trumpet, reassemble, replace oil, test run and paint with 2-part marine black epoxy coating. (5-6 Weeks Delivery ARO)

I have also included current pricing on a new replacement with a 4-6 Week delivery for your consideration

Thank you,
Jacob Reed

We have disassembled this machine, measured all bearing surfaces shafts and endbells for wear, recorded all bearing information, tested all windings for possible faults using BakerSurge Tester.
